

Social Content Engine - Test Document

Purpose: Testing the Social Content Engine

This document has been created to test the functionality of the Social Content Engine. The engine is designed

to automate content creation for various social media platforms. This document will serve as input to test

the PDF processing, content generation, audio conversion, video creation, and call-to-action integration features.

1. Document Processing:

- The engine should correctly extract this text and process it for further content generation.

2. Content Generation:

- The extracted text will be used to generate social media content using AI models like OpenAI's GPT.

3. Audio Conversion:

- The generated content should be converted into an audio file.

4. Video Creation:

- The content and audio will be overlaid onto a background video to create a final social media post.

5. Call-to-Action Integration:

- A call-to-action will be added at the end of the video.

Please use this document as a test input for the Social Content Engine to ensure that each module functions as expected.
